Meet the Newest Farm Residents

As the farm expands, so does the list of livestock. Eleven sheep now dot the pastures. A breeding program will increase the size of the flock in short order. Once old enough, the lambs will be given to community members to either start their flocks or aid in abating their food insecurity.

Hôpital Sacré Coeur Farm By Abdel Alexis, Director of Human Resources, HSC The farm in the Bérard section of Milot is making good progress. Currently, the farm includes more than 30 goats (males and females), eleven sheep, and 58 oxen (18 males and 40 females). The long

A Look at the Progress of the

drought due to the El Niño phenomenon hit Haiti for more than eight months last year and hindered the livestock's growth because of a scarcity of feed grasses. This phenomenon caused a lack of water to irrigate the land and hampered any gardening approach. To overcome these problems, the hospital management decided to drill four artesian wells powered by solar pumping systems on either side of the land to water the garden and the plants to feed the animals. Nearly two and a half acres have been prepared and planted with sugar cane. Sugar cane is nutritious and holds a lot of water, the perfect plant for food and hydration for the

employees with cane juice extracted from the stems. We are in the final phase of preparing over twelve acres of land for vegetable production. Preparations were made for planting. The fencing installation was completed using wire mesh powered by an electric current to prevent animals from entering the garden areas. The fields were plowed and refined, and the earth was furrowed. Simultaneously, a nursery for market gardening

plants was set up to provide the necessary seedlings. This garden will be divided into several plots to

farm's livestock during droughts. The leaves will also supply hospital cafeteria

grow vegetables (cabbage, beets, tomatoes, carrots, peppers, spinach, eggplant, broccoli, celery, parsley, and okra.), tubers (sweet potatoes, cassava, and yam.), and an area for plantains. The products from the garden will be used to supply the hospital cafeteria with organic products, and the surplus will be distributed to employees and the Milot community. Such an initiative makes perfect sense when Haiti, specifically Milot, faces a shortage of agricultural products caused mainly by the closure of the Dominican Republic border. This border closure exacerbates the already very high food insecurity in the country.

see an average of 175 patients a week, all with different types of needs that can be traumatic, orthopedic, surgical, cardiac, or respiratory.

Jean Mary Auguste, MD, has only had one year of work at the hospital, but he already shows leadership. As Chief Physician of the Emergency Department, he is naturally calm and possesses all the character traits needed in a busy department often faced with crises. He listens to his patients, shows empathy, uses discernment, is respectful, and has a sense of duty, commitment, and is

A family doctor by training, Dr Auguste is expected to grow to show his full potential in the Hôpital Sacré Coeur's Emergency Department. He has all the necessary qualities to take command of the greatly expanded, 4,600 square feet Emergency Department anticipated with the building of the new Women's and Children's Hospital — an expansion critically needed given the patient volume.

Very often, certain employees are seen

Director of Human Resources, HSC

Driver-Mechanic assigned to the general services department of this institution. A very skilled driver, he quickly distinguished himself as one of the best employees in his department. Kerne spares neither his time nor his energy to work to ensure the smooth running of the hospital. Very motivated in carrying out his tasks, he has always demonstrated good knowhow and exceptional will. This allowed him to obtain, in December 2015, during the employees' day, a congratulation associated with a bonus from management as a sign of recognition. A model employee due to his attitude, kindness, and undeniable flexibility at work, he was promoted in

to ensure the smooth running of the hospital. All activities of the institution relating to transport, management, and maintenance of the vehicle fleet, generators, oxygen production equipment, etc., are under his coordination, tasks that he carries out dynamically with the help of the technical support of his immediate supervisor, the Director of Operations. A man of good business, Kerne is today an asset for the hospital, a model of commitment the institution can greatly count on to achieve its vision and noble mission.

Oral Surgery

Plastic Surgery

Urgent Need for Urology Teams.

The Hôpital Sacré Coeur Farm began in

response to the extreme food insecurity

After careful study, the hospital realized the best use of its current resources to meet the food crisis included converting 90 acres of land suitable for food production into a farm. The hospital's agricultural project now includes 58 cattle, 30 goats, 11 sheep, and the production of 800 chickens every six weeks. Livestock supports the hospital
